Tourist Spot Management

Rismin M.T.

Abstract

The main objective of the project is to develop a system that gives data relating to the particular place. Any information, guidance, displayed advertisements on this web site reaches ample potential customers. This project is principally helpful for the tourist's having no plan concerning the places they need to go to. By providing a geographic based mostly system the tourists and other people shifting to new cities will get more robust steerage of the places they need to go to. Additionally the users will give their expertise on the tour which can facilitate the new users to go to the place.Android app for Tour Recommendation System.

In the present system a customer has to approach various agencies to find details of places and to book tickets. This often requires a lot of time and effort. A customer may not get the desired information from these offices and often the customer may be misguided. It is tedious for a customer to plan a particular journey and have it executed properly

The proposed system is a web based application and maintains a centralized repository of all related information. The system allows one to easily access the relevant information and make necessary travel arrangements. Users can decide about places they want to visit and make bookings online for travel and accommodation.
